

ARSHPREET KAUR

arshpreetkaur122006@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Punjab, India

SUMMARY

Software Engineering student at Chitkara University, enrolled in the Deakin University Australia 2+2 Global Program. Scored High Distinction in Semester 1. Team won Best First Year Hack at Eclipse 6.0, a competitive hackathon at Thapar University, building a full campus platform in under 24 hours. Experienced in full-stack web development, embedded systems, Python, Java, and UI design. Strong communicator and public speaker with multiple debate competition wins.

EDUCATION

Chitkara University, Punjab (Deakin University Australia 2+2 Global Program) 2026 - Present

Bachelor of Software Engineering

- Semester 1 Grade: High Distinction (HD)
- Deakin University Australia 2+2 Program: first two years at Chitkara, final two years at Deakin Australia

Sacred Heart Convent Senior Secondary School, Punjab 2025

Class 12: Physics, Chemistry, Mathematics (PCM)

- Aggregate: 93%

Sacred Heart Convent Senior Secondary School, Punjab 2023

Class 10

- Aggregate: 94%

EXPERIENCE

Motoweb Solutions, Software Development Intern May 2025 - Jul 2025

Jagraon Centre, Punjab, India

- Completed an intensive internship programme in Software Development at an ISO 9001:2015 certified organisation
- Worked on real-world software projects, gaining hands-on experience in development workflows and tools
- Certificate No. 02414, issued 18 August 2025

PROJECTS

CampusGrid: A real-time compute-sharing platform for distributed ML jobs, implementing fault-tolerant job dispatch and live resource monitoring 2026

Role: Project Architect/Team Leader Tech Stack: React, Vite, Tailwind, FastAPI, Celery, Redis, PostgreSQL, Docker

- **Situation:** Competed in Eclipse 6.0, a 24-hour hackathon at Thapar University, Punjab, against experienced student teams.
- **Task:** Design and build a functional campus resource and collaboration platform within the hackathon time limit.
- **Action:** Collaborated with a team to plan, design, and develop the platform under strict time constraints, dividing work across frontend, backend, and core features.
- **Result:** Won Best First Year Hack at Eclipse 6.0, recognised among first-year teams for the platform delivered.

VaultVote: Blockchain-powered voting platform on Base Sepolia 2025

Role: Blockchain Developer Tech Stack: Solidity, OpenZeppelin, React, Wagmi, Viem

- **Situation:** Joined a team project to design and build VaultVote alongside fellow developers.
- **Task:** Contribute to developing the application as part of the team.
- **Action:** Collaborated with teammates on planning and building out the application's functionality.
- **Result:** Delivered a completed team-built application, VaultVote.

Personal Portfolio Website

2026

Solo Project

- **Situation:** Needed a professional online presence to showcase projects and skills to recruiters and collaborators.
- **Task:** Design and build a fully responsive personal portfolio website from scratch, without relying on templates.
- **Action:** Built the site using HTML, JavaScript, CSS and React implementing SEO meta tags, smooth scroll animations, and a terminal-themed UI.
- **Result:** Delivered a live, responsive portfolio site that professionally showcases projects and skills.

HealthSync: IoT Based Elderly Health Monitoring System

2025

Solo Project

- **Situation:** Elderly individuals often face health risks, such as abnormal vitals or unsafe environmental conditions, that can go unnoticed without continuous monitoring.
- **Task:** Design a system to monitor the health and immediate environment of elderly individuals in real time.
- **Action:** Built the system using Arduino Nano, MLX90614, DHT22, MAX30102, MQ135, and an LCD display to track body temperature, heart rate, room temperature and humidity, and air quality. Integrated Linux and Python to continuously read sensor data and automatically send email alerts to a caretaker whenever a critical reading, such as an abnormal BPM, went beyond a safe threshold. Added a buzzer alert so a nearby caregiver could respond immediately.
- **Result:** Combined embedded systems, sensors, Linux, and Python automation into a practical solution aimed at improving elderly care and safety.

SKILLS

Languages: Python, Java, C#, C++, HTML, CSS, JavaScript, Solidity

Frameworks & Tools: React, Tailwind CSS, Docker, Linux, Redis, SQL Databases

Design: Adobe Suite, Canva, MS Office, UI/Visual Design

Soft Skills: Public speaking, Communication, Teamwork, Debate competition winner

ACHIEVEMENTS & CERTIFICATIONS

- Best First Year Hack, Eclipse 6.0 Hackathon, Thapar University, Punjab (2025)
- Certificate of Internship Completion in Software Development, Motoweb Solutions (2025)
- High Distinction (HD), Semester 1, Bachelor of Software Engineering, Deakin/Chitkara
- Multiple debate competition wins, recognised public speaker
